20. ABSTRACT (Continue on reverse side if necessary and identify by block number)

In July 1971 a report on "An Experimental, Comprehensive Flare Index and its Derivation for 'Major' Flares, 1955-1969" was published by the present authors as Report UAG-14 of World Data Center A for Solar-Terrestrial Physics. The index apparently proved to be a useful tool for some investigators, and values of the indices for the later years, 1970-1974, were published in Report UAG-52, "Experimental Comprehensive Solar Flare Indices for Certain Flares, 1970-1974". Requests have been received for values of the Comprehensive Flare Index (CFI) for still later years. Accordingly, the present report has been prepared for 1975 through 1979, years that complete data for solar cycle 20 and provide information for the ascending branch of cycle 21. (For November-December 1979, it was necessary to use preliminary summaries of flare data. Final H_{α} flare evaluations were not available for these months at the time of preparation of this report.)

DTIC FILE COPY

Item 20 continued

We continue to point out the experimental nature of the index and to recognize its imperfections, but its use and availability for almost a decade have introduced a certain gratifying ease in the handling of extensive flare data. Comprehensive flare indices, and the profiles on which they are based, for the so-called "major" flares, permit one to identify easily flare-events that were well above average in some or all aspects of the electromagnetic spectrum (ionizing, optical, and radio frequency radiation). In spite of changing observing and reporting techniques, over the years, it is our belief that Reports UAG-14 and 52 and the present study, together present relatively complete and homogeneous information about the truly greatest flares (i.e., CFI > 10) in the last 25 years (see Report UAG-52, page 19 and part 4 of this study). For "major" flares with CFI's < 10, modifications in the observing and reporting programs (primarily of Type II bursts) have introduced certain unavoidable inhomogeneities in the number of events qualifying for inclusion in the lists of so-called "major" flares.

The five components that comprise the "profile" of the flare are listed below. The sum of the five components gives the Comprehensive Flare Index (CFI).

- a. Importance of ionizing radiation as indicated by time-associated Short Wave Fade or Sudden Ionospheric Disturbance;* (Scale 0-3).
- b. Importance of H_α flare; (Scale 0**-3).
- c. Magnitude of ~ 10 m flux; (characteristic of log of flux in units of $10^{-22} \text{Wm}^{-2} \text{Hz}^{-1}$).
- d. Dynamic spectrum; (Type II = 1, Continuum = 2, Type IV with duration > 10 minutes = 3).
- e. Magnitude of ~ 200 MHz flux; (characteristic of log of flux in units of $10^{-22} \text{Wm}^{-2} \text{Hz}^{-1}$).

* Prior studies reported in UAG-52 indicated a close relationship between the importance of the SID and the peak x-ray flux for major flares. The two values increase together. Accordingly we have continued to use the magnitude of the SID as a measure of the ionizing radiation.

**H_α subflares are evaluated as of importance "0".

1. INTRODUCTION

In July 1971 a report on "An Experimental, Comprehensive Flare Index and its Derivation for 'Major' Flares, 1955-1969" was published by the present authors as Report UAG-14 of World Data Center A for Solar-Terrestrial Physics. The index apparently proved to be a useful tool for some investigators, and values of the indices for the later years, 1970-1974, were published in Report UAG-52, "Experimental Comprehensive Solar Flare Indices for Certain Flares, 1970-1974". Requests have been received for values of the Comprehensive Flare Index (CFI) for still later years. Accordingly, the present report has been prepared for 1975 through 1979, years that complete data for solar cycle 20 and provide information for the ascending branch of cycle 21. (For November-December 1979, it was necessary to use preliminary summaries of flare data. Final H α flare evaluations were not available for these months at the time of preparation of this report.)

We continue to point out the experimental nature of the index and to recognize its imperfections, but its use and availability for almost a decade have introduced a certain gratifying ease in the handling of extensive flare data. Comprehensive flare indices, and the profiles on which they are based, for the so-called "major" flares, permit one to identify easily flare-events that were well above average in some or all aspects of the electromagnetic spectrum (ionizing, optical, and radio frequency radiation). In spite of changing observing and reporting techniques, over the years, it is our belief that Reports UAG-14 and 52 and the present study, together present relatively complete and homogeneous information about the truly greatest flares (i.e., CFI > 10) in the last 25 years (see Report UAG-52, page 19 and part 4 of this study). For "major" flares with CFI's < 10, modifications in the observing and reporting programs (primarily of Type II bursts) have introduced certain unavoidable inhomogeneities in the number of events qualifying for inclusion in the lists of so-called "major" flares.

The five components that comprise the "profile" of the flare are listed below. The sum of the five components gives the Comprehensive Flare Index (CFI).

- a. Importance of ionizing radiation as indicated by time-associated Short Wave Fade or Sudden Ionospheric Disturbance;* (Scale 0-3).
- b. Importance of H α flare; (Scale 0**-3).
- c. Magnitude of ~ 10 cm flux; (characteristic of log of flux in units of $10^{-22} \text{Wm}^{-2} \text{Hz}^{-1}$).
- d. Dynamic spectrum; (Type II = 1, Continuum = 2, Type IV with duration > 10 minutes = 3).
- e. Magnitude of ~ 200 MHz flux; (characteristic of log of flux in units of $10^{-22} \text{Wm}^{-2} \text{Hz}^{-1}$).

* Prior studies reported in UAG-52 indicated a close relationship between the importance of the SID and the peak x-ray flux for major flares. The two values increase together. Accordingly we have continued to use the magnitude of the SID as a measure of the ionizing radiation.

**H α subflares are evaluated as of importance "0".

2. COMPREHENSIVE FLARE INDICES FOR "MAJOR" FLARES

In the present study, as in the two earlier reports, values of the Comprehensive Flare Index have been derived for flares that are considered to have been well above average in either ionizing, H α , or radio frequency radiation. Specifically, the index has been determined for all flares in the years 1975-79 that satisfied any one of the following criteria:

- Short wave fade (or Sudden Ionospheric Disturbance), importance > 3.
- H α Flare, importance > 3.
- 10 cm Flux, > $500 \times 10^{-22} \text{Wm}^{-2} \text{Hz}^{-1}$.
- Type II burst.
- Type IV radio emission, duration > 10 minutes.

Each flare that satisfied at least one of the above criteria can, in some sense, be considered to have been a "major" flare and is so referred to in this report. The times of these "major" flares, with their respective profiles and comprehensive indices, are listed in Table 1 (at the end of the text). In this table, the reported time refers to the H α flare or subflare, when known. When no H α event has been reported, a nominal time is given in parentheses and refers to the approximate time of the short wave fade or the radio frequency emission. Careful

A 21

distinction has been made between "no flare or subflare reported" and "H α observations not in progress". An asterisk in the Time column of Table 1 identifies the latter situation. Underlined times indicate best estimates of starting and ending times of the H α flare. The remarks column gives additional information about the flare event, especially the radio frequency emission. This column indicates the occurrence of a Type II burst when this fact is masked in the fourth entry in the profile by the occurrence of additional continuum or Type IV emission.

The primary source of flare data used in Table 1 is the Quarterly Bulletin on Solar Activity supplemented by reports from individual observatories given in Solar-Geophysical Data bulletins. The latter publication is also the source for the ionospheric and radio frequency data. For conventions of abbreviations, see "Solar-Geophysical Data (SGD)" especially SGD 366 (Supplement) Explanation of Data Reports, February 1975, U. S. Department of Commerce (Boulder, Colorado 80302), USA). See also the notes at the end of Table 1 of this report.

3. COMMENTS ON THE DATA INCLUDED IN THE LIST OF "MAJOR" FLARES

Table 2 of this report provides a comparison of the H α importance of the flares in the list of "major" flares, 1975-1979, with the Comprehensive Flare Indices for the same events. In these years, as in earlier studies, flares that were markedly above average in at least one aspect of the electromagnetic spectrum included a high proportion of events (56%) that were reported only as H α subflares, or were not detected and not reported at all in H α . These results continue to support the worldwide effort to compile data on H α subflares as well as for the more important optical events.

TABLE 2. H α IMPORTANCE OF FLARES IN LIST OF "MAJOR" FLARES, 1975-1979

H α Importance	Value of Comprehensive Index						Total
	1-3	4-6	7-9	10-12	13-15	>15	
	<u>Number of Flares</u>						
3	0	0	3	2	5	1	11
2	0	10	24	25	8	0	67
1	15	54	58	30	3	0	160
S	89	67	30	3	0	0	189
?	77	25	7	5	0	0	114
TOTAL	181	156	122	65	16	1	541
	<u>Percent of Flares</u>						
3	0	0	2	3	31	100	2
2	0	6	20	38	50	0	12
1	8	35	47	46	19	0	30
S	49	43	25	5	0	0	35
?	43	16	6	8	0	0	21
TOTAL	100	100	100	100	100	100	100

The "major" flares distributed by year and by value of the comprehensive flare index are enumerated in Table 3. It can be seen that even in 1976, the year of sunspot minimum between cycles 20 and 21, there were 31 events that met our criteria for "major" flares. For 3 of these flares, the CFI's were > 10 and constituted significant solar events. In addition, Table 3 shows the level of flare activity in the first three years of cycle 21.

TABLE 3. NUMBER OF "MAJOR" FLARES DISTRIBUTED BY VALUE OF COMPREHENSIVE FLARE INDEX, 1975-1979

YEAR	Comprehensive Flare Index																		TOTAL
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	
1975	6	2	7	4	4	6	4	3	1	1	2								40
1976	2	3	7	1	1	6	4	3	1	1	1	1							31
1977	16	6	5	3	5	1	4	2	1	1	4	2	2						52
1978	37	16	15	17	27	21	17	17	14	11	9	9	6		4			1	221
1979	23	15	21	23	18	20	14	21	15	13	5	5	3		1				197
TOTAL	84	42	55	48	55	54	43	46	32	27	21	17	11		5			1	541

Similar data from Reports UAG-14 and 52 for reasonably comparable years at the start of cycles 19 and 20 are given in Table 4 and provide a possible basis of comparison for the beginning years of the three cycles. Information for the year of minimum and for a fourth year in cycles 19 and 20 is also included to broaden the basis of comparison.

TABLE 4. NUMBER OF "MAJOR" FLARES

		Total	With CFI > 10
(Year of Minimum)	(1954)	(Data not available)	
Cycle 19	1955	21	1
	1956	77	6
	1957	162	29
	1958	115	28

(Year of Minimum)	(1964)	(3)	(1)
Cycle 20	1965	6	0
	1966	68	16
	1967	102	8
	1968	119	13

(Year of Minimum)	(1976)	(31)	(3)
Cycle 21	1977	51	9
	1978	221	40
	1979	197	27
	1980	(Data not available)	

It is difficult to know how to make valid comparisons for the successive cycles. The increased availability of radio frequency data in later years has tended to increase the number of flare events that qualified as "major" on the basis of Type II bursts. The time of minimum within the year of minimum also has varied in successive cycles making detailed comparisons difficult. In spite of these situations it can be said that the rise to maximum in cycle 21 was especially flare-rich with more events qualifying as "major" flares in 1978 and 1979 than in any year since 1955 when these studies began. The numbers of flares with CFI > 10 in 1978 and 1979 were also exceedingly high.

4. COMMENTS ON APPENDIX TO TABLE 1 WITH COMPREHENSIVE INDICES FOR "LESSER" FLARES

In order to provide values of the Comprehensive Index for flares of potential interest but not included in the list of "major" flares, an Appendix to Table 1 has been prepared. The Appendix follows the format and conventions of Table 1 and gives profiles and comprehensive indices for the following categories of flares:

- a. All flares of H α importance 2 not contained in the list of "major" flares.
- b. All ionospheric disturbances of importance 2 not contained in the list of "major" flares.
- c. All 10 cm events with an index of 2 not contained in the list of major flares (i.e., bursts with flux < 500 but > 100 flux units).
- d. All flares for which Type IV emission was reported but for which the duration was less than 10 minutes.

- e. All flares not contained in the list of "major" flares for which continuum emission in the radio spectrum was reported. The frequent reports of day-long continuum without flare association are not included in this tabulation.

This compilation of comprehensive flare indices for so-called "lesser" flares contains 549 entries, 58 of them for flares of $H\alpha$ importance 2. There were only two cases of indices as great as 9 and 10 respectively. Apparently the listing of "major" flares in Table 1 picks up practically all instances of flares with comprehensive indices as great as 9. See Figure 1 for comparative distributions of comprehensive indices for "major" or "lesser" flares reported in this study.

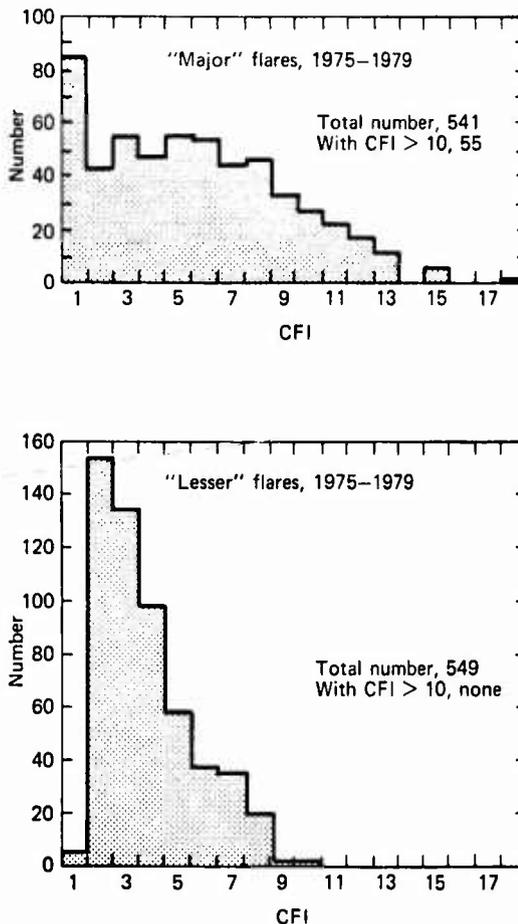

Fig. 1 Distribution of "Major" and "Lesser" Flares by Comprehensive Flare Index (CFI), 1975-1979.

ACKNOWLEDGEMENTS

The authors acknowledge with gratitude the help and encouragement of Dr. E. C. Roelof of the Applied Physics Laboratory of The Johns Hopkins University in the preparation of this report. This effort was supported by the Air Force Geophysics Laboratory via Task I of Contract N00024-81-C-5301 between the U. S. Navy and JHU/APL.

See notes to Table 1 on page 20.

NOTES TO TABLE 1:

- † This list of "major" flares includes all flares that satisfied any one of the five criteria stated in section 2 of this report.
- abcde The successive entries in the column titled "H α Flare Profile" refer respectively to evaluations of the ionizing radiation, the H α flare, the \sim 10 cm flux, the type of event in the dynamic spectrum and the \sim 200 MHz flux. See section 1 of this report. A dash (-) appearing in the profile set indicates "no observations" were available for that particular entry.
- †† When no flare or subflare was reported, the beginning time of the SID or radio frequency event is shown in parentheses.
- ? A question mark following the index value indicates a Type IV event that is questionable for either duration or conflicting reports.
- r In the remarks column, the following abbreviations have been used: DCM, M, DKM = decimetric, metric, and dekametric events in the dynamic spectrum; BO (Boulder), CLG (Culgoora), DURN (Durnten), DWIN (Dwingeloo), H (Pt. Davis), MAN (Manila), SAG (Sagamore Hill), WEIS (Weissenau) = stations reporting dynamic spectrum events.

UAG SERIES OF REPORTS

Between 4 and 12 UAG Reports are published at irregular intervals each year. Subscriptions may be ordered through the National Geophysical and Solar-Terrestrial Data Center, Environmental Data and Information Service, NOAA, Boulder, CO 80303, USA. The subscription price for the calendar year only is \$30.00 (\$17.30 additional for foreign mailing). Each year the single copy prices total less than \$30.00, the expiration date for all subscriptions will be extended. Back issues may be purchased at the prices shown below plus a \$3.00 handling charge per order; some reports, though, are available only on microfiche. Orders must include check or money order payable in U.S. currency to the Department of Commerce, NOAA/NGSDC.

- UAG-1 "IQSY Night Airglow Data," by L.L. Smith, F.E. Roach, and J.M. McKennan, ESSA Aeronomy Laboratory, Boulder, CO, July 1968, 305 pp, \$1.75.
- UAG-2 "A Reevaluation of Solar Flares, 1964-1966," by Helen W. Dodson and E. Ruth Hedeman, McMath-Hulbert Observatory, University of Michigan, Pontiac, MI, August 1968, 28 pp, \$0.30.
- UAG-3 "Observations of Jupiter's Sporadic Radio Emission in the Range 7.6-41 MHz, 6 July 1966 through 8 September 1968," by James W. Warwick and George A. Dulk, University of Colorado, Boulder, CO, October 1968, 35 pp, \$0.55.
- UAG-4 "Abbreviated Calendar Record 1966-1967," by J. Virginia Lincoln, Hope I. Leighton and Dorothy K. Kropp, ESSA now NOAA, Aeronomy and Space Data Center, Boulder, CO, January 1969, 170 pp, \$1.25.
- UAG-5 "Data on Solar Event of May 23, 1967 and its Geophysical Effects," compiled by J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA now NOAA, Boulder, CO, February 1969, 120 pp, \$0.65.
- UAG-6 "International Geophysical Calendars 1957-1969," by A.H. Shapley and J. Virginia Lincoln, ESSA Research Laboratories, now NOAA, Boulder, CO, March 1969, 25 pp, \$0.30.
- UAG-7 "Observations of the Solar Electron Corona: February 1964 - January 1968," by Richard T. Hansen, High Altitude Observatory, NCAR, Boulder, CO, and Kamuela, HI, October 1969, 12 pp, \$0.15.
- UAG-8 "Data on Solar-Geophysical Activity October 24 - November 6, 1968," Parts 1 and 2, compiled by J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA now NOAA, Boulder, CO, March 1970, 312 pp, \$1.75 (includes Parts 1 and 2).
- UAG-9 "Data on Cosmic Ray Event of November 18, 1968 and Associated Phenomena," compiled by J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA now NOAA, Boulder, CO, April 1970, 109 pp, \$0.55.
- UAG-10 "Atlas of Ionograms," edited by A.H. Shapley, ESSA Research Laboratories now NOAA, Boulder, CO, May 1970, 243 pp, \$1.50.
- UAG-12 "Solar-Geophysical Activity Associated with the Major Geomagnetic Storm of March 8, 1970," Parts 1, 2 and 3, compiled by J. Virginia Lincoln and Dale B. Bucknam, World Data Center A, Upper Atmosphere Geophysics, ESSA now NOAA, Boulder, CO, April 1971, 466 pp, \$3.00 (includes Parts 1-3).
- UAG-13 "Data on the Solar Proton Event of November 2, 1969 through the Geomagnetic Storm of November 8-10, 1969," compiled by Dale B. Bucknam and J. Virginia Lincoln, World Data Center A, Upper Atmosphere Geophysics, ESSA now NOAA, Boulder, CO, May 1971, 76 pp, \$0.90.
- UAG-14 "An Experimental, Comprehensive Flare Index and Its Derivation for 'Major' Flares, 1955-1969," by Helen W. Dodson and E. Ruth Hedeman, McMath-Hulbert Observatory, University of Michigan, Pontiac, MI, July 1971, 25 pp, \$0.30.
- UAG-16 "Temporal Development of the Geophysical Distribution of Auroral Absorption for 30 Substorm Events in each of IQSY (1964-65) and IASY (1960)," by F.T. Berkey, University of Alaska, Fairbanks, AK; V.M. Driatskiy, Arctic and Antarctic Research Institute, Leningrad, USSR; K. Henriksen, Auroral Observatory, Tromsø, Norway; D.H. Jelly, Communications Research Center, Ottawa, Canada; T.I. Snchuka, Arctic and Antarctic Research Institute, Leningrad, USSR; A. Theander, Kiruna Geophysical Observatory, Kiruna, Sweden; and J. Ylintermi, University of Oulu, Oulu, Finland, September 1971, 131 pp, \$0.70 (microfiche only).
- UAG-17 "Ionospheric Drift Velocity Measurements at Jicamarca, Peru (July 1967 - March 1970)," by Ben B. Balsley, NOAA Aeronomy Laboratory, Boulder, CO, and Ronald F. Woodman, Jicamarca Radar Observatory, Instituto Geofisico del Peru, Lima, Peru, October 1971, 45 pp, \$0.55 (microfiche only).
- UAG-18 "A Study of Polar Cap and Auroral Zone Magnetic Variations," by K. Kawasaki and S.-I. Asasofu, University of Alaska, Fairbanks, AK, June 1972, 21 pp, \$0.20.
- UAG-19 "Reevaluation of Solar Flares 1967," by Helen W. Dodson and E. Ruth Hedeman, McMath-Hulbert Observatory, University of Michigan, Pontiac, MI, and Marta Rovira de Micelli, San Miguel Observatory, Argentina, June 1972, 15 pp, \$0.15.
- UAG-21 "Preliminary Compilation of Data for Retrospective World Interval July 26 - August 14, 1972," by J. Virginia Lincoln and Hope I. Leighton, World Data Center A for Solar-Terrestrial Physics, NOAA, Boulder, CO, November 1972, 128 pp, \$0.70.
- UAG-22 "Auroral Electrojet Magnetic Activity Indices (AE) for 1970," by Joe Haskell Allen, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, November 1972, 146 pp, \$0.75.
- UAG-23 "U.R.S.I. Handbook of Ionogram Interpretation and Reduction," Second Edition, November 1972, edited by W.R. Piggott, Radio and Space Research Station, Slough, UK, and K. Rawer, Arbeitsgruppe für Physikalische Weltraumforschung, Freiburg, GFR, November 1972, 324 pp, \$1.75.
- UAG-23A "U.R.S.I. Handbook of Ionogram Interpretation and Reduction," Second Edition, Revision of Chapters 1-4, edited by W.R. Piggott, Radio and Space Research Station, Slough, UK, and K. Rawer, Arbeitsgruppe für Physikalische Weltraumforschung, Freiburg, GFR, November 1972, 135 pp, \$2.14.
- UAG-24 "Data on Solar-Geophysical Activity Associated with the Major Ground Level Cosmic Ray Events of 24 January and 1 September 1971," Parts 1 and 2, compiled by Helen E. Coffey and J. Virginia Lincoln, World Data Center A for Solar-Terrestrial Physics, NOAA, Boulder, CO, December 1972, 462 pp, \$2.00 (includes Parts 1 and 2).

- UAG-25 "Observations of Jupiter's Sporadic Radio Emission in the Range 7.6-41 MHz, 9 September 1968 through 9 December 1971," by James W. Warwick, George A. Dulk and David G. Swann, University of Colorado, Boulder, CO, February 1973, 35 pp, \$0.35.
- UAG-26 "Data Compilation for the Magnetospherically Quiet Periods February 19-23 and November 29 - December 3, 1970," compiled by Helen E. Coffey and J. Virginia Lincoln, World Data Center A for Solar-Terrestrial Physics, NOAA, Boulder, CO, May 1973, 129 pp, \$0.70.
- UAG-27 "High Speed Streams in the Solar Wind," by D.S. Intriligator, University of Southern California, Los Angeles, CA, June 1973, 16 pp, \$0.15.
- UAG-28 "Collected Data Reports on August 1972 Solar-Terrestrial Events," Parts 1, 2 and 3, edited by Helen E. Coffey, World Data Center A for Solar-Terrestrial Physics, NOAA, Boulder, CO, July 1973, 932 pp, \$4.50.
- UAG-29 "Auroral Electrojet Magnetic Activity Indices AE(11) for 1968," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, October 1973, 148 pp, \$0.75.
- UAG-30 "Catalogue of Data on Solar-Terrestrial Physics," prepared by NOAA Environmental Data Service, Boulder, CO, October 1973, \$1.50. Supersedes UAG-11, 15, and 20 catalogs.
- UAG-31 "Auroral Electrojet Magnetic Activity Indices AE(11) for 1969," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, February 1974, 142 pp, \$0.75.
- UAG-32 "Synoptic Radio Maps of the Sun at 3.3 mm for the Years 1967-1969," by Earle B. Mayfield, Kennon P. White III, and Fred I. Shimabukuro, Aerospace Corp., El Segundo, CA, April 1974, 26 pp, \$0.35.
- UAG-33 "Auroral Electrojet Magnetic Activity Indices AE(10) for 1967," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, May 1974, 142 pp, \$0.75.
- UAG-34 "Absorption Data for the 107/100 and 1.59," compiled and edited by A.N. Sheeley, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO; W.R. Piggott, Appleton Laboratory, Slough, England; and K. Rawer, Arbeitsgruppe für Physikalische Weltraumforschung, Freiburg, GFR, June 1974, 381 pp, \$2.00.
- UAG-35 "Catalogue of Digital Geomagnetic Variation Data at World Data Center A for Solar-Terrestrial Physics," prepared by NOAA Environmental Data Service, Boulder, CO, July 1974, 20 pp, \$0.20.
- UAG-36 "An Atlas of Extreme Ultraviolet Flashes of Solar Flares Observed via Sudden Frequency Deviations During the ATM-SKYLAB Missions," by R.F. Donnelly and E.L. Berger, NOAA Space Environment Laboratory; Lt. J.D. Busman, NASA Communications Center; G. Hanson, NASA Marshall Space Flight Center; T.L. Jones, University of Leicester, UK; G.M. Lerfald, NOAA Wave Propagation Laboratory; K. Najita, University of Hawaii; W.M. Retallack, NOAA Space Environment Laboratory and W.J. Wagner, Sacramento Peak Observatory, October 1974, 95 pp, \$0.55.
- UAG-37 "Auroral Electrojet Magnetic Activity Indices AE(10) for 1966," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, December 1974, 142 pp, \$0.75.
- UAG-38 "Master Station List for Solar-Terrestrial Physics Data at WDC-A for Solar-Terrestrial Physics," by R.W. Buhmann, World Data Center A for Solar-Terrestrial Physics, Boulder, CO; Juan D. Roederer, University of Denver, Denver, CO; and M.A. Shea and D.F. Smart, Air Force Cambridge Research Laboratories, Hanscom AFB, MA, December 1974, 110 pp, \$1.60.
- UAG-39 "Auroral Electrojet Magnetic Activity Indices AE(11) for 1971," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, February 1975, 144 pp, \$2.05.
- UAG-40 "H-Alpha Synoptic Charts of Solar Activity for the Period of Skylab Observations, May 1973 - March 1974," by Patrick S. McIntosh, NOAA Space Environment Laboratory, Boulder, CO, February 1975, 32 pp, \$0.56.
- UAG-41 "H-Alpha Synoptic Charts of Solar Activity During the First Year of Solar Cycle 20 October 1964 - August 1965," by Patrick S. McIntosh, NOAA Space Environment Laboratory, Boulder, CO and Jerome T. Holtz, American Science and Engineering, Inc., Cambridge, MA, March 1975, 25 pp, \$0.48.
- UAG-42 "Observations of Jupiter's Sporadic Radio Emission in the Range 7.6-80 MHz, 10 December 1971 through 21 March 1975," by James W. Warwick, George A. Dulk and Anthony C. Riddle, University of Colorado, Boulder, CO, April 1975, 49 pp, \$1.15.
- UAG-43 "Catalog of Observation Times of Ground-Based Skylab-Coordinated Solar Observing Programs," compiled by Helen E. Coffey, World Data Center A for Solar-Terrestrial Physics, NOAA, Boulder, CO, May 1975, 159 pp, \$3.00.
- UAG-44 "Synoptic Maps of Solar 9.1 cm Microwave Emission from June 1962 to August 1973," by Werner Graf and Ronald N. Bracewell, Stanford University, Stanford, CA, May 1975, 183 pp, \$2.55.
- UAG-45 "Auroral Electrojet Magnetic Activity Indices AE(11) for 1972," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, May 1975, 144 pp, \$2.10 (microfiche only).
- UAG-46 "Interplanetary Magnetic Field Data 1963-1964," by Joseph H. King, National Space Science Data Center, NASA Goddard Space Flight Center, Greenbelt, MD, June 1975, 382 pp, \$1.95.
- UAG-47 "Auroral Electrojet Magnetic Activity Indices AE(11) for 1973," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, June 1975, 144 pp, \$2.10 (microfiche only).
- UAG-48A "Synoptic Observations of the Solar Corona during Carrington Rotations 1580-1596 (11 October 1971 - 15 January 1973)," (Reissue of UAG-48 with quality images), by R.A. Howard, M.J. Koman, D.J. Michels, M. Tousey, C.R. Detwiler, D.E. Roberts, R.T. Seal, and J.D. Whitney, U.S. Naval Research Laboratory, Washington, DC, and R.T. Hansen and S.F. Hansen, C.J. Garcia and E. Yasukawa, High Altitude Observatory, NCAR, Boulder, CO, February 1976, 200 pp, \$4.27.

- UAG-49 "Catalog of Standard Geomagnetic Variation Data," prepared by NOAA Environmental Data Service, Boulder, CO, August 1975, 125 pp, \$1.85.
- UAG-50 "High-Latitude Supplement to the URSI Handbook on Ionogram Interpretation and Prediction," edited by W.R. Pigott, British Antarctic Survey, c/o Appleton Laboratory, Slough, UK, October 1975, 294 pp, \$4.00.
- UAG-51 "Synoptic Maps of Solar Coronal Hole Boundaries Derived from He II 304A Spectroheliograms from the Manned Skylab Missions," by J.D. Bohlin and D.M. Rubenstein, U.S. Naval Research Laboratory, Washington, DC, November 1975, 30 pp, \$0.54.
- UAG-52 "Experimental Comprehensive Solar Flare Indices for Certain Flares, 1970-1974," by Helen W. Dodson and E. Ruth Hedeman, McMath-Hulbert Observatory, University of Michigan Pontiac, MI, November 1975, 27 pp, \$0.60.
- UAG-53 "Description and Catalog of Ionospheric F-Region Data, Jicamarca Radio Observatory (November 1966 - April 1969), by W.L. Clark and T.E. Van Zandt, NOAA Aeronomy Laboratory, Boulder, CO, and J.P. McClure, University of Texas at Dallas, Dallas, TX, April 1976, 10 pp, \$0.33.
- UAG-54 "Catalog of Ionosphere Vertical Soundings Data," prepared by NOAA Environmental Data Service, Boulder, CO, April 1976, 130 pp, \$2.10.
- UAG-55 "Equivalent Ionospheric Current Representations by a New Method, Illustrated for 8-9 November 1969 Magnetic Disturbances," by Y. Kamide, Cooperative Institute for Research in Environmental Sciences, University of Colorado, Boulder, CO; H.W. Kroehl, Data Studies Division, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO; M. Kanamitsu, Advanced Study Program, National Center for Atmospheric Research, Boulder, CO; Joe Haskell Allen, Data Studies Division, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO; and S.-I. Akasofu, Geophysical Institute, University of Alaska, Fairbanks, AK, April 1976, 91 pp, \$1.60 (microfiche only).
- UAG-56 "Iso-intensity Contours of Ground Magnetic H Perturbations for the December 16-18, 1971, Geomagnetic Storm," Y. Kamide, Cooperative Institute for Research in Environmental Sciences, University of Colorado, Boulder, CO, April 1976, 37 pp, \$1.39.
- UAG-57 "Manual on Ionospheric Absorption Measurements," edited by K. Rawer, Institut fur Physikalische Weltraumforschung, Freiburg, GFR, June 1976, 302 pp, \$4.20.
- UAG-58 "ATS6 Radio Beacon Electron Content Measurements at Boulder, July 1974 - May 1975," by R.B. Fritz, NOAA Space Environment Laboratory, Boulder, CO, September 1976, 61 pp, \$1.04.
- UAG-59 "Auroral Electrojet Magnetic Activity Indices AE(11) for 1974," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, December 1976, 144 pp, \$2.16.
- UAG-60 "Geomagnetic Data for January 1976 (AE(7) Indices and Stacked Magnetograms)," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, July 1977, 57 pp, \$1.07.
- UAG-61 "Collected Data Reports for STIP Interval II 20 March - 5 May 1976, edited by Helen E. Coffey and John A. McKinnon, World Data Center A for Solar-Terrestrial Physics, Boulder, CO, August 1977, 313 pp, \$2.95.
- UAG-62 "Geomagnetic Data for February 1976 (AE(7) Indices and Stacked Magnetograms)," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, September 1977, 55 pp, \$1.11.
- UAG-63 "Geomagnetic Data for March 1976 (AE(7) Indices and Stacked Magnetograms)," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, September 1977, 57 pp, \$1.11.
- UAG-64 "Geomagnetic Data for April 1976 (AE(8) Indices and Stacked Magnetograms)," by Joe Haskell Allen, Carl C. Abston and Leslie D. Morris, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO, February 1978, 55 pp, \$1.00.
- UAG-65 "The Information Explosion and Its Consequences for Data Acquisition, Documentation, Processing," by G.K. Hartmann, Max-Planck-Institut fur Aeronomie, Lindau, GFR, May 1978, 36 pp, \$0.75.
- UAG-66 "Synoptic Radio Maps of the Sun at 3.3 mm 1970-1973," by Earle B. Mayfield and Fred I. Shimabukuro, Aerospace Corp., El Segundo, CA, May 1978, 30 pp, \$0.75.
- UAG-67 "Ionospheric D-Region Profile Data Base. A Collection of Computer-Accessible Experimental Profiles of the D and Lower E Regions," by L.F. McNamara, Ionospheric Prediction Service, Sydney, Australia, August 1978, 30 pp, \$0.88 (microfiche only).
- UAG-68 "A Comparative Study of Methods of Electron Density Profile Analysis," by L.F. McNamara, Ionospheric Prediction Service, Sydney, Australia, August 1978, 30 pp, \$0.88 (microfiche only).
- UAG-69 "Selected Disturbed D-Region Electron Density Profiles. Their relation to the undisturbed D region," by L.F. McNamara, Ionospheric Prediction Service, Sydney, Australia, October 1978, 50 pp, \$1.29 (microfiche only).
- UAG-70 "Annotated Atlas of the H-alpha Synoptic Charts for Solar Cycle 20 (1964-1974) Carrington Solar Rotations 1487-1616," by Patrick S. McIntosh, NOAA Space Environment Laboratory, Boulder, CO, February 1979, 327 pp, \$3.50.
- UAG-71 "Magnetic Potential Plots over the Northern Hemisphere for 26-28 March 1976," A.D. Richmond, NOAA Space Environment Laboratory, Boulder, CO; H.W. Kroehl, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO; M.A. Henning, Lockheed Missiles and Space Co., Aurora, CO; and Y. Kamide, Kyoto Sangyo University, Kyoto, Japan, April 1979, 118 pp, \$1.50.
- UAG-72 "Energy Release in Solar Flares, Proceedings of the Workshop on Energy Release in Flares, 26 February - 1 March 1979, Cambridge, Massachusetts, U.S.A.," edited by David M. Rust, American Science and Engineering, Inc., Cambridge, MA, and A. Gordon Enslie, Harvard-Smithsonian Center for Astrophysics, Cambridge, MA, July 1979, 68 pp, \$1.50 (microfiche only).

- UAG-73 "Auroral Electrojet Magnetic Activity Indices AE(11-12) for January - June 1975," by Joe Haskell Allen, Carl C. Abston, J.E. Salazar and J.A. McKinnon, National Geophysical and Solar-Terrestrial Data Center, NOAA, Boulder, CO, August 1979, 114 pp, \$1.75.
- UAG-74 "ATS-6 Radio Beacon Electron Content Measurements at Ootacamund, India, October - July 1976," by S.D. Bouwer, K. Davies, R.F. Donnelly, R.N. Grubb, J.E. Jones and J.H. Taylor, NOAA Space Environment Laboratory, Boulder, CO, and R.G. Rastogi, M.R. Deshpande, H. Chandra and G. Sethia, Physical Research Laboratory, Ahmedabad, India, March 1980, 58 pp, \$2.50.
- UAG-75 "The Alaska IMS Meridian Chain: Magnetic Variations for 9 March - 27 April 1978," by H.W. Kroehl and G.P. Kosinski, National Geophysical and Solar-Terrestrial Data Center, Boulder, CO; S.-I Akasofu, G.J. Romick, C.E. Campbell and G.K. Corrick, University of Alaska, Fairbanks, AK; and C.E. Hornback and A.M. Gray, NOAA Space Environment Laboratory, Boulder, CO, June 1980, 107 pp, \$3.00.
- UAG-76 "Auroral Electrojet Magnetic Activity Indices AE(12) for July - December 1975," by Joe Haskell Allen, Carl C. Abston, J.E. Salazar and J.A. McKinnon, National Geophysical and Solar-Terrestrial Data Center, NOAA, Boulder, CO, August 1980, 116 pp, \$2.50.
- UAG-77 "Synoptic Solar Magnetic Field Maps for the Interval Including Carrington Rotations 1601-1680, May 5, 1973 - April 26, 1979," by J. Harvey, B. Gillespie, P. Miedaner and C. Slaughter, Kitt Peak National Observatory, Tucson, AZ, August 1980, 66 pp, \$2.50.
- UAG-78 "The Equatorial Latitude of Auroral Activity During 1972-1977," by N.R. Sheeley, Jr. and R.A. Howard, E. O. Hulbert Center for Space Research, U.S. Naval Research Laboratory, Washington, DC and B.S. Dandekar, Air Force Geophysics Laboratory, Hanscom AFB, MA, October 1980, 61 pp, \$3.00.
- UAG-79 "Solar Observations During Skylab, April 1973 - February 1974, I. Coronal X-Ray Structure, II. Solar Flare Activity," by J.M. Hanson, University of Michigan, Ann Arbor, MI; and E.C. Roelof and R.E. Gold, The Johns Hopkins University, Laurel, MD, December 1980, 43 pp, \$2.50.
- UAG-80 "Experimental Comprehensive Solar Flare Indices for 'Major' and Certain Lesser Flares, 1975-1979," by Helen W. Dodson and E. Ruth Hedeman, The Johns Hopkins University, Laurel, MD, July 1981, 33 pp, \$2.00.
